# Why doesn't *EVERY* teacher employ inquiry?

Inquiry is a multifaceted activity that involves making observations; posing questions; examining books and other sources of information to see what is already known; planning investigations; reviewing what is already known in light of experimental evidence; using tools to gather, analyze, and interpret data; proposing answers, explanations, and predictions; and communicating the results. Inquiry requires identification of assumptions, use of critical and logical thinking, and consideration of alternative explanations.

National Science Education Standards, 1996

# Why doesn't *EVERY* teacher employ inquiry?

- There are many misconceptions about what inquiry teaching is:
  - Doing hands-on science is inquiry
  - The Scientific Method is inquiry
  - All science should be taught through inquiry
  - Inquiry outcomes are unpredictable
  - Inquiry means the students control everything

SUSTAINING THE  
**BLUE PLANET**  
GLOBAL WATER EDUCATION CONFERENCE

The Healthy Hydration Company™

**UN HABITAT**  
FOR A BETTER URBAN FUTURE

# Why doesn't *EVERY* teacher employ inquiry?

- Teachers fear
  - losing control of student behavior (it's a free-for-all!)
  - inquiry will lack content specificity and rigor (and they won't be able to meet the standards)
  - they don't have enough time to do inquiry
  - students might ask questions for which they do not (yet) have the answers
  - inquiry does not look like they are 'teaching'

How can WE as professional  
development providers  
help teachers  
overcome their barriers?

# Clearly Define Inquiry

## Five Essential Features

1. Learners are engaged by scientifically oriented questions.
2. Learners give priority to evidence, which allows them to develop and evaluate explanations that address scientifically oriented questions.
3. Learners formulate explanations from evidence to address scientifically oriented questions.
4. Learners evaluate their explanations in light of alternative explanations, particularly those reflecting scientific understanding.
5. Learners communicate and justify their proposed explanations.

Inquiry and the National Science Education Standards:  
A Guide for Teaching and Learning (NRC 2000).

## VARIATIONS

### ESSENTIAL FEATURE

	Amount of Learner Self-Direction			
	More ←			→ Less
Learner engages in scientifically oriented questions	Learner poses a question	Learner selects among questions, poses new questions	Learner sharpens or clarifies question provided by teacher, materials, or other source	Learner engages in question provided by teacher, materials or other source
Learner gives priority to evidence in responding to questions	Learner determines what constitutes evidence and collects it	Learner directed to collect certain data	Learner given data and asked to analyze	Learner given data and told how to analyze
Learner formulates explanations from evidence	Learner formulates explanation after summarizing evidence	Learner guided in process of formulating explanations from evidence	Learner given possible ways to use evidence to formulate explanation	Learner provided with evidence and how to use evidence to formulate explanation
Learner connects explanations to scientific knowledge	Learner independently examines other resources and forms the links to explanations	Learner directed toward areas and sources of scientific knowledge	Learner given possible connections	
Learner communicates and justifies explanations	Learner forms reasonable and logical argument to communicate explanations	Learner coached in development of communication	Learner provided broad guidelines to sharpen communication	Learner given steps and procedures for communication
	Amount of Direction from Teacher or Material			
	Less ←			→ More

# Practice Inquiry

- Keep a notebook *and write in it!*
- Observe, examine, look, ponder
- Ask questions and speculate
- Wonder
  - I wonder if . . .
  - What if . . .
- Read/research, connect with scientific thought
- Test your thoughts
- Use experience to revise thoughts and assumptions
- Share, communicate

SUSTAINING THE

# Model Teaching Through Inquiry

- Adapt PW lessons to open-inquiry lessons

## Just Passing Through

1. View slope photos and speculate on behavior
2. Whole-body simulation
  1. water on a vegetated slope
  2. water on a bare slope
  3. Erosion on a vegetated slope
  4. Erosion on a bare slope
3. Discuss this experience
4. Assess via written descriptions

## Can there be MORE inquiry?

# Model Teaching Through Inquiry

- Adapt PW lessons to open-inquiry lessons

## Just Passing Through

1. View slope photos and speculate on behavior
2. Whole-body simulation
  1. water on a vegetated slope
  2. water on a bare slope
  3. Erosion on a vegetated slope
  4. Erosion on a bare slope
3. Discuss this experience
4. Assess via written descriptions

## Can there be MORE inquiry?

Focus Question: How does water on a bare slope move differently than water on a slope covered with plants?

# Model Teaching Through Inquiry

- Adapt PW lessons to open-inquiry lessons

## Just Passing Through

1. View slope photos and speculate on behavior
2. Whole-body simulation
  1. water on a vegetated slope
  2. water on a bare slope
  3. Erosion on a vegetated slope
  4. Erosion on a bare slope
3. Discuss this experience
4. Assess via written descriptions

## Can there be MORE inquiry?

### Focus Question

Predict: Examine the photos, observe differences, predict how water will behave differently on each slope

# Model Teaching Through Inquiry

- Adapt PW lessons to open-inquiry lessons

## Just Passing Through

1. View slope photos and speculate on behavior
2. Whole-body simulation
  1. water on a vegetated slope
  2. water on a bare slope
  3. Erosion on a vegetated slope
  4. Erosion on a bare slope
3. Discuss this experience
4. Assess via written descriptions

## Can there be MORE inquiry?

### Focus Question

### Predict

Observe: run simulations of water on vegetated slope, bare slope, with and without erosion

# Model Teaching Through Inquiry

- Adapt PW lessons to open-inquiry lessons

## Just Passing Through

1. View slope photos and speculate on behavior
2. Whole-body simulation
  1. water on a vegetated slope
  2. water on a bare slope
  3. Erosion on a vegetated slope
  4. Erosion on a bare slope
3. Discuss this experience
4. Assess via written descriptions

## Can there be MORE inquiry?

Focus Question

**Predict**

**Observe**

Explain: based on the observations, why did the system react as it did?

  2. water on a bare slope
  3. Erosion on a vegetated slope
  4. Erosion on a bare slope
3. Discuss this experience
4. Assess via written descriptions

## Can there be MORE inquiry?

### Focus Question

### Predict – Observe – Explain

Evaluate explanation: Research what others have to say about water on a slope

# Model Teaching Through Inquiry

- Adapt PW lessons to open-inquiry lessons

## Just Passing Through

1. View slope photos and speculate on behavior
2. Whole-body simulation
  1. water on a vegetated slope
  2. water on a bare slope
  3. Erosion on a vegetated slope
  4. Erosion on a bare slope
3. Discuss this experience
4. Assess via written descriptions

## Can there be MORE inquiry?

### Focus Question

**Predict – Observe – Explain**

### Evaluate Explanation

Ask “what if . . . ” and “I wonder” questions. Investigate those questions.

# Model Teaching Through Inquiry

- Adapt PW lessons to open-inquiry lessons

## Just Passing Through

1. View slope photos and speculate on behavior
2. Whole-body simulation
  1. water on a vegetated slope
  2. water on a bare slope

4. Assess via written descriptions

## Can there be MORE inquiry?

### Focus Question

**Predict – Observe – Explain**

**Evaluate Explanation**

**Investigate**

Use new experience to refine explanation.

**Communicate:** share findings with others!

SUSTAINING THE  
**BLUE PLANET**  
GLOBAL WATER EDUCATION CONFERENCE

The Healthy Hydration Company™

**UN HABITAT**  
FOR A BETTER URBAN FUTURE

# Model Teaching Through Inquiry

- Demonstrate the use of the Inquiry Continuum to scaffold inquiry teaching

Try This:	Essential Feature
Provide question and data to analyze	➔ Engage in scientific questions and give priority to evidence
Demonstrate; Predict – Observe – Explain	➔ Develop explanations
P-O-E, research, revise explanation	➔ Evaluate explanations and connect to scientific concepts
Write “I wonder . . . ” and “What if . . . ” questions then test new explanations	➔ Evaluate explanations and connect to scientific concepts
Report results and conclusions	➔ Communicate and Justify Explanations

# Address Fears

## Teachers fear

- losing control
- lack content specificity and rigor
- insufficient time
- Insufficient content knowledge
- doesn't LOOK like 'teaching'

## Avoid the pitfalls

- Set rules and routines specific to inquiry activities
- Set the stage
- Question to reach for higher levels on Bloom's Taxonomy
- Set high expectations
- Don't forget literature research
- Use science notebooks
- Educate administrators and parents

# Provide Practical Tools

## Avoid the pitfalls of learning to use Inquiry . . . .

Use guiding questions to empower students to answer their own questions

Student-driven content isn't beyond the teacher when teacher and student are co-learners

Celebrate student inquiry outcomes

The proof (of the effectiveness and value of inquiry) is in the pudding. Share these widely and freely.

Share resources regarding the value of inquiry with peers, administrators, and parents.

Change is difficult; critical observers will value your confidence and the credibility that educational research can lend to your efforts.

GLOBAL WATER EDUCATION CONFERENCE

The Healthy Hydration Company™

**UNO**HABITAT  
FOR A BETTER URBAN FUTURE

## Avoid the pitfalls of learning to use Inquiry

. . . .

Set clear expectations for behavior;  
practice behavior control systems

Inquiry doesn't have to be chaos if students  
know how to behave

*“. . . during the first weeks of school I spend A LOT of time on expectations, what does "on task" look like and sound like? What does a good drawing look like? Basically skills and behavior that we come back to over and over during the year, but less and less do I have to 'control'."*

*"I'm pretty sure the kids in her school could do inquiry science all the time, because they have been taught to be respectful of each other and committed to performing for the best interests of everyone."*

## Avoid the pitfalls of learning to use Inquiry

. . . .

Develop and use an Inquiry Monitoring Chart; share it with students

Set clear expectations for inquiry practices to ensure students engage in inquiry rather than play

<b>Initial Investigation</b>	+	✓	-
Verbalizes observations			
Writes own and team members' observations in notebook			
Sketches accurately, including labels			
Writes multiple "What if . . ." and/or "I wonder . . ." questions			
<b>Developing a Question</b>	+	✓	-
Sorts questions into "testable," "needs revision," and "expert to answer" categories			
Refines questions to optimum testability			
Prioritizes questions and helps select target question for investigation			
Identifies manipulated variable, resulting variable, and controlled variables

# So What?

- Educators make up our primary audience
- To attract your audience, you must know your audience:
  - Demand for more effective STEM education
  - Little budget or no budget
  - Intense worries about personal time and classroom time
  - Administrations are hyper-focused on standards and testing
- To attract and keep your audience you must give them the most value for their time and money
