

# WILL THE DROUGHT EVER END?

Drought is part of America's Water Future. While droughts have always occurred, NOAA predicts that warmer temperatures will lead to more frequent and intense droughts. Water education helps us conserve and protect water and prepare for what's to come. Visit [americaswaterfuture.org](http://americaswaterfuture.org) to learn how to support water education and awareness.

America's Water Future is a campaign of the Project WET Foundation, a 501(c)(3) nonprofit organization (TIN: 20-0281441).
