

# WILL IT FLOOD AGAIN?

Floods are part of America's Water Future. Are you prepared? NOAA estimates that by 2050, a majority of U.S. coastal areas could be threatened by 30 or more days of flooding each year. Water education helps us understand what's to come. Visit [americaswaterfuture.org](http://americaswaterfuture.org) to find out how you can support effective water education where you live.

America's Water Future is a campaign of the Project WET Foundation, a 501(c)(3) nonprofit organization (TIN: 20-0281441).
