

2021 NETWORK ANNUAL REPORT

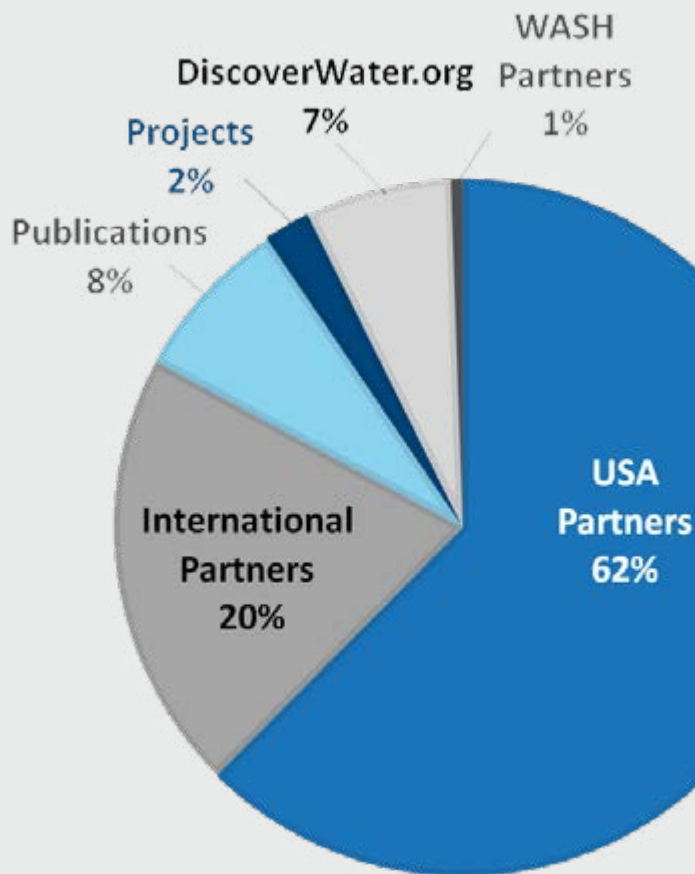

PROJECT WET FOUNDATION

In 2021 many of our partners returned to in-person workshops. Trainings shifted to digital delivery in 2020 and continued this trend in 2021 even with in-person workshops. Many partners used a hybrid model, combining our asynchronous online training with shorter in-person workshops or synchronous virtual workshops. Climate, Water and Resilience trainings were a major focus this year, educating 1,197 educators—12% of all educators trained.

“I will think more intentionally about how I can integrate these concepts from Project WET in to all my lessons. If I make multidisciplinary lessons then students are meeting standards and learning about water conservation.”
